

PreFormed® Ready-To-Tile Shower Seat

Lightweight and easy installation are just two of the advantages of installing PreFormed® Shower Seats. Framing is not needed. No wood or cellulose fibers means that there is nothing to rot. PreFormed Shower Seats are made of high-density material, waterproof, and ready to tile. Easy to integrate into your custom tile application, beauty and durability are the best reason for starting with a PreFormed Shower Seat. Waterproof ... Rot Proof ... Worry Free.....The difference is **Clear**.

INSTALLATION:

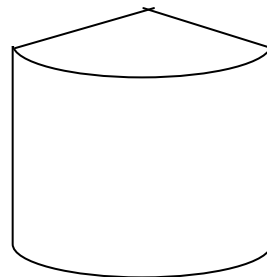

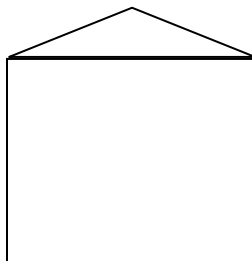

1. Dry fit the seat to be sure it fits snug against the walls. The walls must be square and plumb.
2. Remove seat and completely waterproof the wall and floor, behind the seat, with Latex Polymer Liquid Waterproof Membrane. Allow the Latex Polymer Liquid Waterproof Membrane to completely dry.
3. Apply a Polymer Modified Portland Cement Medium Bed thinset to the wall and floor behind the bench using a 1/2" x 1/2" square notch or 19/32 half moon trowel. Note: on the wall, trowel the mortar horizontally; slide the bench in the mortar using the NTCA trowel and error method and embed into the mortar on the floor, achieving complete coverage.
4. Once the Polymer Modified Portland Cement Medium Bed thinset is set, tape all of the seams of the bench with fiberglass reinforced mesh and Latex Polymer Liquid Waterproof Membrane.
5. Tile

NOTE: PreFormed Shower Seats are waterproof. It is important that the outside coating remains intact and not damaged. Do not cut the Shower Seat. This will void all warranties.

Note: All seats are 20" high

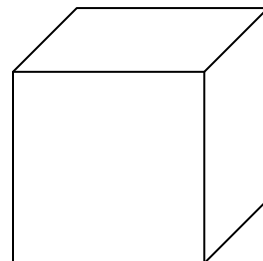

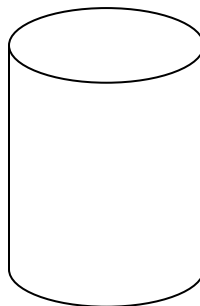

PF-401 Custom Sizes Available

16" x 16" Triangle
PF-402

23" x 23" Triangle
PF-403

16"x16" Triangle-Convex
PF-404

15" Round
PF-408

12" x 12" Square
PF-410
